

Anton Bogomazov

Senior Backend Software Engineer

abogomazov.dev@gmail.com • linkedin.com/in/abogomazov

Senior Software Engineer with 5+ years of experience building backend systems and internal platforms. I focus on developer tooling, automation, and modernisation of legacy services through incremental refactoring and testing.

Based in Belgrade, Serbia.

Experience

Software Developer at JetBrains

Jan 2026 – Present

Senior Software Engineer at Holland & Barrett

Jan 2024 – Jan 2026

- Built internal IAM platform with SDK for developers, enabling faster service deployment without implementing custom security solutions.
- Designed and owned 3 internal services (HR portal, A/B testing and Tracking platforms), replacing vendor solutions and eliminating licensing costs.
- Established development standards and maintained shared component library, improving code consistency and team productivity across projects.

Skills: Kotlin, Spring Boot, WebFlux, Reactor, Microservices, Kafka, Amazon Web Services (AWS), API Design, Extreme Programming (XP), Architecture, TestContainers, Flyway.

Senior Software Engineer at Tradeshift

Aug 2022 – Jan 2024

- Fixed critical product catalog import issues in B2B marketplace, preventing loss of 2 key partner contracts.
- Unblocked legacy service development by adding comprehensive test coverage and refactoring core modules.

Skills: Java, Python, JavaScript, Amazon Web Services (AWS), Serverless, Extreme Programming (XP), Testing, Architecture, Data Engineering, ElasticSearch.

Senior Kotlin Software Engineer at Beeline

Apr 2022 – Aug 2022

- Built centralised user data repository from scratch, designing migration pipelines for millions of legacy records and resolving data conflicts.
- Introduced CI/CD pipelines and automated testing, reducing deployment cycle from weeks to same-day releases.
- Redesigned distributed monolith architecture, decreasing feature time-to-market by 25%.

Skills: Kotlin, Spring Boot, Microservices, Kafka, Postgres, jOOQ, CI/CD, REST, API Design, Architecture, System Design, Kotest, Test-Driven Development (TDD), Functional Design (FP), Data Engineering.

Kotlin Software Engineer at Domclick

Dec 2020 – Apr 2022

- Designed pledge property and mortgage services, increasing product revenues by 6%.
- Saved developers 1 hour/day by automating Gradle builds.

Skills: Kotlin, Java, Spring Boot, Microservices, REST, Postgres, Hibernate, RabbitMQ, Rest-assured, Liquibase.

Education

Computing and IT, The Open University

May 2025 – Present

Remote, Part-time

BCS/EuroInf-accredited program combining theoretical computer science foundations with practical software development and IT management skills.

Computer Science, Ecole 42 Moscow Campus

Dec 2019 – Jan 2021

Intensive peer-to-peer programming bootcamp focused on C/C++, algorithms, and system programming.
